**Skier Ability: I = Beginner/Cautious skiing at lighter release/retention settings.**

Ski conservatively, prefer lower speeds, prefer easy moderate slopes. Favour lower than average release/retention settings. This corresponds to an increased risk of inadvertent binding release in order to gain increased releasability in a fall. Type I settings apply to entry level skiers uncertain of their classification.

**Skier Ability: II = Moderate skiing at average release/retention settings.**

Ski moderately, prefer a variety of speeds. Ski on varied terrain, including most difficult trails. Are all skiers who do not meet all the descriptions of Type I or Type III.

**Skier Ability: III = Advance/Aggressive skiing at higher release/retention settings.**

Ski aggressively, normally higher speeds and prefers more difficult varied terrain. Favour higher than average release/retention settings. This corresponds to a decreased releasability in a fall in order to gain a decreased risk of inadvertent binding release.

**Snowboarder: Left = Regular    Right = Goofy**
